

Dutch Green LEDlights

Dutch Green LEDlights have been experts in LED grow lights since the beginning of 2008. Beginning growers can use the LFG Spectrabox LED lights, while professionals use the LED Spectra Unit.

There is also a vast assortment of LED Spectra plant spotlights: process activators, entrance lights, heat lamps, HPS lights – all LED lights.

Other items include LED grow lights for seeds and buds and grow lights for mother plants.

LFG Spectrabox

Dutch Green LEDlights developed the LFG Spectrabox product in 2008. Since 2010, the company has used 3-watt

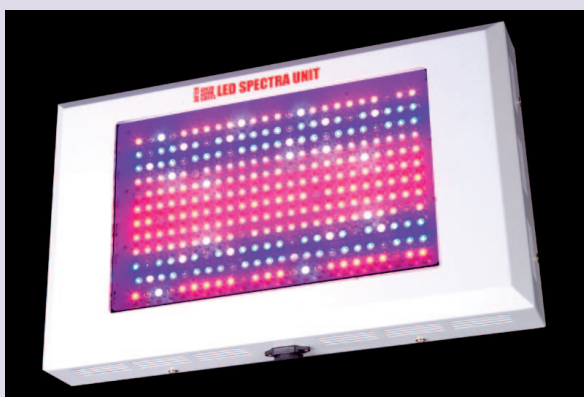

flowering stimulator LEDs in the new generation of the LFG Spectrabox, known as LFG Spectrabox Professional. **LFG Spectrabox PRO II** is the most recent generation: perfect for beginning growers

who will have the opportunity to gain experience with LED lights at a reasonable cost.

LED Spectra Unit

In 2009, the company launched three

new series for professional grows under the collective name LED Spectra Unit: **LED Spectra Unit Classic** (11 colours), **LED Spectra Unit Special** (16 colours) and the main model, **LED Spectra Unit Power**, which, thanks to its 16 colours and 1200 watts, satisfies even the most demanding growers.
